---

- 1) You need maximum space because your file library will be large already and will grow.
- 2) Must have PHP v4 or higher (Most do)
- 3) Must have MySQL databases for your store.
- 4) Must be on a Linux server (Most Are)

We have made special arrangements with [duoservers.com](http://duoservers.com) for custom packages that are specifically designed for our types of stores. We quite a few store owners that are currently using them and there is a 100% satisfaction rate with the service they get.

For more information on these special packages please follow the link below:
