One of the social network script options that you have available to you when building a brand new social networking website is Phpfox. Is Phpfox the best social network script or social network site creation tool out there?

Phpfox is a powerful social network script that can enable nearly any webmaster to create their own unique niche-based social networking website. Thanks to the popularity of social networking sites like MySpace and Facebook, new social networking sites are springing up all over the place, as savvy internet marketers discover the profiting potential of having a niche-based social networking site of their very own. What are the benefits of a social network site? It's simple, really:

- Nearly all of the content is created by your members,
- All of the content is promoted by your members as they invite their friends to the site,
- Members provide you with marketing research as well as demographic info just by filling out their profiles.

The Phpfox script is capable of providing your social network site with all of this necessary functionality and a great deal more. When you research social network script options like phpfox for your own uses, it is important to read reviews from developers, programmers and webmasters to let you know how well other people have found a certain social network script to work for them.

By using phpfox, you can participate in a large and active forum full of members who are willing to help you get started. This forum can be a godsend when it comes to setting up a social network script like phpfox. You can get a lot of help here, and you can also find out more information about add on scripts and modifications that can help you better utilize the phpfox social network script.

Most social network script options are difficult to install and implement, but this is not true when it comes to phpfox. The installation of this social network script is relatively easy, utilizing only three basic steps -

- Create a database,
- Upload your script files and chmod them according to the directions,
- Visit the installation page and put in your information. The information you need is your database name, your username and your password. Once this is done, just run it and the installation file will do the rest of the work for you.

Of course, if you do not want to bother with the installation process yourself, then the Phpfox company will do it for you, but it requires that you pay a nominal fee. After the installation, you should be able to log directly into the admin panel where you can choose a template, and the rest is up to you. Phpfox even offers a template that mirrors MySpace almost exactly, if that is what you are trying to achieve with your social network site and social network script.

Phpfox is an excellent social network script that can work wonders for you if you are trying to build a community network site. Just keep in mind that you have other options as well that are worth exploring.
